

Construction Management Portal — Complete Workflow Guide

Version 1.0 · Generated 2026-08-11

Modules	Project Planning · Field Ops · Procurement · Finance · Clients · Users · Vendor Bidding · Alerts
Roles	Admin · Site Engineer · Accountant · Procurement Officer · Client · Vendor

1. System Overview

BUILDCORE is a role-based construction management portal. Every project moves through a consistent lifecycle — from client onboarding to final balance sheet. Each role sees only the modules and projects relevant to them.

Master Project Lifecycle

Roles & Access

	Primary responsibility	Key screens
Admin	Full control of every module	Dashboard, Projects, Field Ops, Clients, Finance, Vendors, Users
Site Engineer	Site execution: phases, progress, attendance	Projects (assigned), Field Ops, Vendors
Accountant	Money in/out: invoices, payroll, balance sheets	Finance, Payroll, Clients, Projects
Procurement Officer	Vendors, bids, purchase orders	Vendors, Bid Packages, Project Procurement
Client	Read-only visibility of THEIR projects	Dashboard, Projects, Field Ops (view-only)
Vendor	Bid on invited packages	Bid Invites portal

2. Project Planning Workflow

1. Admin opens **Clients** → **New Client** and registers the client company with contact details.
2. Go to **Projects** → **New Project**: enter name, select client & site engineer, set location (auto-detect available) and budget in ■ (live crore preview shown, e.g. 250000000 = ■25.00 Cr).
3. Open the project → **Phases** tab → Add Phase for each stage (Foundation, Structure, Finishing...) with planned dates.
4. Assign employees to phases (Crew → Assign) so labour is mapped to the right work.
5. Site engineer posts **Tracking** updates with photos, % progress and a status flag (OnTrack / Delayed / Blocked).
6. Overall completion is computed automatically as the average of phase progress; issues raise a red 'Active Issues' flag.

Blocked Work Alerts: whenever a phase or update is flagged Blocked/Delayed, all Admins and the project's site engineer instantly receive an in-app notification (bell icon in the sidebar).

3. Field Ops — Employees & Attendance

1. Site engineer or Admin opens **Field Ops**, selects the project and date (up to 3 days back; Admin unlimited).
2. Register workers with **Add Employee**: name, trade category (Mason, Electrician...), wage type & daily wage.
3. Mark attendance with one tap per worker: **P** present, **½** half-day, **A** absent, **L** leave.
4. Labour cost is computed automatically (days × daily wage) and flows into the project ledger and balance sheets.
5. Clients see a **view-only** Field Ops page for their own projects — wages and personal data stay hidden.

4. Procurement & Vendor Bidding Workflow

1. Register vendors under **Vendors** with trade, contacts and insurance documents (expiry is tracked).
2. Create a **Bid Package** for a scope of work on a project and invite selected vendors.
3. Invited vendors log into their portal (**Bid Invites**) and submit price + notes before the due date.
4. Use **Bid Comparison** to review all bids side-by-side and award the winner.
5. Awarding auto-creates a draft **Purchase Order** or **Subcontract** (with retainage %) for the vendor.
6. Approval is blocked (422) if the vendor's insurance has expired — upload a current certificate first.
7. Track **Change Orders** (Admin approval recomputes committed amount), **Material Deliveries**, and **Pay Applications** (retainage auto-calculated, G702/G703 line items, lien waivers) through to payment.

5. Finance Workflow — Invoices, Payroll & Expenses

1. Accountant/Admin raises invoices in **Project** → **Finance** (amount, due date, description). Status moves Sent → Partial → Paid automatically, or Overdue past the due date.
2. Record client payments against invoices — every payment is a **credit** in the project ledger.
3. Log site expenses by category (Fuel, Material, Equipment... categories are editable) — each is a **debit**.
4. Any invoice can be **printed** (clean PDF layout) or shared via **WhatsApp / Email** in one click.
5. Run **Payroll** for staff from Finance → Payroll: process a period, review entries, mark paid.
6. The **Org Finance** page shows income, cost, profit, outstanding invoices and overdue alerts across all projects.

6. Balance Sheets & Reports

1. **Finance** → **Balance Sheet** tab: total credit, total debit, overall profit and overall loss across all projects, with loss-making projects highlighted in red.
2. **Required Employee Payments** panel: pending staff payroll plus daily-wage labour dues grouped by trade.
3. **Project** → **Balance Sheet** tab: budget, client payment received, payment released, balance, a money-out breakdown, and every transaction sorted latest-first.
4. Both balance sheets export to **PDF** and **Excel** (multi-sheet workbook) for auditors or banks.

7. Role-wise Daily Workflows

ADMIN

Owns everything

1. Check Dashboard KPIs & alerts
2. Review blocked-work notifications
3. Approve POs / change orders
4. Review balance sheet & loss projects
5. Manage users & clients

SITE ENGINEER

Runs the site

1. Open Field Ops → mark today's attendance
2. Update phase progress + photos
3. Flag blocked/delayed work
4. Add new workers as they join

ACCOUNTANT

Owns the money

1. Raise / follow up invoices
2. Record client payments
3. Log expenses & run payroll
4. Export balance sheets for reporting

PROCUREMENT OFFICER

Owns buying

1. Register vendors & track insurance
2. Float bid packages & invite vendors
3. Compare bids → award
4. Track deliveries & pay applications

CLIENT

Watches progress

1. Open Dashboard for project KPIs
2. Browse project phases & photo updates
3. View site attendance (read-only)
4. Review shared documents & invoices

VENDOR

Bids & delivers

1. Open Bid Invites portal
2. Submit bids before due date
3. Track award status

8. Permissions Quick Reference

Action	Admin	Site Eng.	Accountant	Proc. Officer	Client	Vendor
Create / edit projects	Yes	—	—	—	—	—
Manage phases & progress	Yes	Assigned	—	—	View	—
Add employees / attendance	Yes	Assigned	Yes	Yes	View	—
Edit wages	Yes	—	Yes	—	—	—
Invoices & payments	Yes	—	Yes	—	View	—
Expenses	Yes	Yes	Yes	Yes	—	—
Payroll	Yes	—	Yes	—	—	—
Balance sheets + export	Yes	Project only	Yes	Project only	—	—
Vendors & bid packages	Yes	Yes	—	Yes	—	Own bids
Approve POs / subcontracts	Yes	—	—	—	—	—
User management	Yes	—	—	—	—	—
Blocked-work alerts	Yes	Yes	—	—	—	—

Tips

1. Theme: use the Sun/Moon toggle (sidebar footer or login page) to switch between light and dark themes.
2. Dashboards are clickable — stat cards filter the project list instantly.
3. Everything financial exports: balance sheets (PDF/Excel) and invoices (print / WhatsApp / email).
